

# Hosting Control Panels

## How do I resolve the Error: "please wait for graphics to be generated" on HSphere/SiteStudio?

This normally occurs when imaker has stopped running, you can check its current status by using

```
/hsphere/shared/SiteStudio/imaker.sh status
```

If this shows the process is not running then it can be restarted by using

```
/hsphere/shared/SiteStudio/imaker.sh restart
```

You should now be able to use SiteStudio and images should be created correctly.
