Linux

How do I change the timezone on Centos 7 to UTC?

CentOS 7 now includes a tool to change the timezone, to view your current timezone run the following command.

```
timedatectl
```

This should display the current timezone configuraton. To change this to UTC (or to any other timezone) run the following.

```
timedatectl set-timezone UTC
```

You can then re-check the timezone by running the command above again.
