

# Command Line

## Where can I find the MySQL root user password for DirectAdmin?

How do I get mysqls root user password for DirectAdmin?

The username and password used to access MySQL as the “root” user can be obtained from the following file.

```
/usr/local/directadmin/conf/mysql.conf
```

In this file you will see the current “root” username and password used by DirectAdmin to access the database.
