

# Command Line

## How do I find the serial/model number of a hard drive?

To find the model or serial number of a hard drive you can use `hdparm` and the device name of the hard drive you need the serial number of.

```
hdparm -i /dev/sda
```

Replacing `"/dev/sda"` with the device of the hard drive the information is needed for which will return data as follows.

```
Model=<model>, FwRev=<revision>, SerialNo=<serial>
```
