

# Command Line

## How do I recalculate Plesk statistics for a site?

If for some reason Plesk does not update the statistics properly for a site or you wish to re-run them after changing log files etc it is a simple process.

1. Login to your Plesk server as user "root" using SSH.
2. Run `"/usr/local/psa/admin/sbin/statistics --calculate-one --domain-name=<domainname>"` - replacing `<domainname>` with the domain name you need to reprocess the statistics for.
