

Command Line

How do I copy the partition table from disk to disk?

When using GPT you can use sgdisk to copy the partition table.

```
FROM="/dev/sdX"  
T0="/dev/sdY"  
sgdisk $FROM -R $T0  
sgdisk -G $T0
```

This will copy the partition table over and set random GUID on the partitions on the destination device.

When using MBR you can use sfdisk to copy the partition table.

```
FROM="/dev/sdX"  
T0="/dev/sdY"  
sfdisk -d $FROM | sfdisk $T0
```
