

Microsoft Windows

Unable to login to Windows Virtual PC with error "Unable to log you on because of an account restriction"

This can be caused by the user account not having a password set.

This will only cause problems when "Integration Features" are enabled, to disable them click on the "Tools" menu and select "Disable Integration Features" which will then take you to the logged in machine. From here you can reset the password on the account and then re-enable "Integration Features" via the Tools menu and then login using the new password.
