VoIP

How do I factory reset a Siemens Gigaset A580IP / C475IP / S685IP

To remove all settings from the phone (It will revert back to DHCP and a default pin of 0000).

- 1. Remove the cables from the base station.
- 2. Put the power cable back into the base whilst holding the blue button for 10 seconds.
- 3. Once you release the button the base should be reset.
- 4. Check which IP has been allocated by your DHCP server and configure in your browser.
